In Today's Issue

- **Will the Election Ignite the Growth to Value Rotation?**
- Growth has massively outperformed value for more than a decade, but if there's a "Blue Wave" coming from today's election, the future stimulus could finally make the growth to value rotation sustainable.
- As such, we wanted to review some of the best core holding value ETFs in the market today, so that when it comes time to make that rotation, we have a list of high-quality, low-fee ETFs that will enable advisors to alter exposure quickly and confidently.
- **Invesco S&P 500 Equal Weight ETF (RSP).** RSP is the equal-weight version of the S&P 500, where each of the 500 stocks is equal-weighted. It's badly lagged the S&P 500 lately, but since inception, it's outperformed the S&P 500 with a 10.84% annualized gains vs. 10.00% for SPY.
- **Vanguard Value ETF (VTV).** VTV has bested all U.S. large-cap value ETFs over a five-year time frame with an impressive 50.82% total return. Morningstar data also confirms that VTV has outperformed the 1,200+ funds in the U.S. large-cap value category average in every one of the last 10 years.
- **Invesco S&P 500 Pure Value ETF (RPV).** RPV is an index-oriented fund that owns around 100 value stocks culled from the broader S&P 500 Index. RPV portfolio sports a blended price-to-earnings ratio of just 15.23 and a price-to-book ratio of 0.96. Both metrics are significantly lower and ultimately more attractive for long-term investors.

Cyclical Rotation to Value

The results of today's election will have numerous potential implications on the markets over the coming months and quarters, but one of the areas it could have the biggest impact is the performance of value vs. growth, if the expected "Blue Wave" comes to fruition.

In fact, one advisor I was speaking to recently stated that the "growth to value" rotation was the single biggest issue he was focused on for the future—because getting that rotation "right" could easily be the difference between outperforming and underperforming in the future.

We've been skeptical about this rotation from growth (tech sector) to value (cyclical sectors like industrials, materials, financials) because it's always lacked a compelling catalyst to cause money to leave growth. But expectations of historic future stimulus might just be that catalyst.

This is a key question from a broad market standpoint as well, because the reality is that the market-cap-weighted S&P 500 Index has essentially become a technology juggernaut in the decade since the 2009 financial crisis. A look at the table below shows just how much future performance is now riding on tech stocks in the large-cap benchmark simply based on their overbalanced allocation size.

Sectors	2009	2020
Technology	18.00%	30.30%
Health Care	15.10%	15.20%
Energy	13.00%	2.40%
Cons Staples	12.80%	8.20%
Financials	10.80%	13.80%
Industrials	9.70%	8.00%
Cons Discret	8.90%	11.90%
Utilities	4.30%	3.50%
Telecom	4.00%	4.30%
Materials	3.40%	2.40%

([source: datatrekresearch.com](https://www.datatrekresearch.com))

There are some caveats to the makeup of these sector weights that must be noted:

- The 30% tech sector allocation in today's S&P 500 Index is achieved when you shift Google and Facebook from communication services where they currently reside.
- Today's allocation in financials also includes real estate, which was split out into its own sector several years ago.
- Finally, Disney, Comcast, and Netflix are added back to consumer discretionary rather than their current position in communication services.

All of these changes are effectively "normalizing" the two data sets for an accurate comparison of sector classifications from back in 2009. The end result is that nearly one-third of all S&P 500 gains and losses are going to be driven by technology stocks.

That's an extremely overbalanced emphasis on a sector that has been a decade-long rock star but will eventually face headwinds in living up to future earnings expectations.

The other side of that barbell is how much the allocation to cyclical sectors (particularly energy) in the S&P 500 Index has shrunk. What used to be a thriving and vital industry has been reduced to pennies on the dollar in investment terms. Consider that Apple alone makes up 6.5% of the current S&P 500 Index – nearly three times the size of the entire large-cap energy space at today's prices. Yikes!

What investors need to be asking themselves is what factors could potentially erode the dominance of technology and shift the balance of power from growth to value.

Some factors include:

- Massive government stimulus
- Corporate taxation changes (rolling back Trump tax cuts)
- Political meddling (break up Big Tech)
- Stall or contraction in overall economic activity

Value or cyclical sectors tend to do better in the early stages of an economic recovery (driven by stimulus) or during periods of weak overall economic growth. That latter reason is because growth areas "cool off" by reverting to more reasonable prices and investors migrate towards more fundamentally stable companies. We saw this phenomenon occur during the beginning of the new millennium

as tech imploded and a flight-to-value took place. The chart at left provides a depiction of this trend change and highlights just how important these secular shifts can be in driving decades-long results.

It wouldn't be a shock to any experi-

enced investor who has lived through these cycles to see a similar occurrence take shape in the future. It's really not a matter of if, but when, this factor momentum shift will occur. The trick is to be prepared to act with a decisive list of top-tier investment tools specifically designed to capitalize on these opportunities.

Investment Idea 1: Equal Weight

It's reasonable that many of your clients expect you to own core holdings in low-cost, large-cap U.S. benchmarks. They understand things such as the S&P 500 and Russell 3000 because they are ubiquitous in the media and are constantly referenced in many aspects of the investment research world. These are the standards from which you will be judged, so deviating heavily from those areas may

not be something that is acceptable from a portfolio construction standpoint.

Fortunately, there is a way to own every single one of the 500 stocks in the S&P 500 with just a different weighting practice that lends itself well to the cyclical sector and value rotation trade. The **Invesco S&P 500 Equal Weight ETF (RSP)** has been in existence since 2003 and has made a name for itself through its unique portfolio construction methodology.

RSP is different from SPY in that it uses an equal-weighted allocation scheme rather than the traditional market capitalization structure. The end re-

Sectors	RSP	SPY
Technology	15.04%	30.30%
Health Care	12.63%	15.20%
Energy	4.56%	2.40%
Cons Staples	6.17%	8.20%
Financials	19.09%	13.80%
Industrials	14.60%	8.00%
Cons Discret	12.11%	11.90%
Utilities	5.92%	3.50%
Telecom	4.22%	4.30%
Materials	5.62%	2.40%

sult is a surprisingly simple way to own all of the same stocks but with a markedly different sector makeup.

The table above shows the current comparison between these two funds as drawn from their respective sponsor data. It should be noted that real estate has been combined into the financial sector for ease of reporting. What is immediately apparent in this simple analysis is how much the technology and health care sectors have been de-

emphasized. The sectors that have grown considerably include financials, energy, materials, and industrials as they are now counted based on the number of relevant companies rather than their valuation size. In the aggregate, RSP allows for a broader representation of all stocks rather than an exponential arc towards a select group.

The long-term performance of this weighting methodology has proven to be a successful alternative to the traditional S&P 500 Index as well. The fund company's own data demonstrates that RSP has outperformed SPY since its inception by an annualized rate of 10.84% versus 10.00%. However, the performance gap has really only been narrowed in just the last three-to-five years as growth (i.e. tech) stocks have soared.

A long-term chart of these two ETFs shows that RSP has managed to generate consistent and cumulative alpha through its emphasis on smaller companies and cyclical sectors. The result of this is a more balanced and equitable ownership of the largest companies in the United States.

It's not a shrinking violet in terms of its mechanical attributes either. The fund has over \$13 billion in total assets as well as trades more than 1 million shares per day on average. That makes for a deep pool of assets in a liquid trading environment that is

easy to justify for all account sizes and holding periods. The fund also is re-balanced on a quarterly basis to ensure no single holding becomes a sustainable outlier. Furthermore, RSP charges a modest expense ratio of 0.20%, which is low enough for investors to carry as a long-term position.

RSP can be utilized as a core holding due to its low cost, high diversification, and minimal tax implications (low portfolio turnover). That means it's practical to put larger allocation sizes in this ETF or swap it out for existing positions that may be less effective in the event we see some of the largest growth stocks falter.

It's really a secure way to shift a portion of the portfolio towards a more balanced strategy without making an abrupt course change that may be more disruptive to clients that prefer the S&P 500 model.

Additionally, it's going to hold up much better under the auspices of a prolonged economic trend change that emphasizes cyclical sectors or value characteristics.

Investment Idea 2: Index Value

The value factor ETF category is comprised of 70 funds of which the top 10 represent \$168 billion in

Sector	VTV
Basic Materials	2.50%
Consumer Discretionary	8.50%
Consumer Staples	11.80%
Energy	4.00%
Financials	17.90%
Health Care	20.00%
Industrials	12.20%
Real Estate	2.20%
Technology	6.60%
Telecommunications	7.20%
Utilities	7.10%

passively managed assets spread across varying market-cap styles. Even with this massive accumu-

lation of prowess, there is one juggernaut that stands out above the rest. The **Vanguard Value ETF (VTV)** is comprised of a staggering \$50.5 billion indexed to 333 large- and mid-cap stocks at an industry-low expense ratio of 0.04%.

While many might assume that those assets have been accumulated through the rock-solid Vanguard reputation and ultra-low carrying costs, it's really the relative performance of the underlying holdings that shines a spotlight on this fund.

VTV has bested all U.S. large-cap value ETFs over a five-year time frame with an impressive 50.82% total return. Morningstar data also confirms that VTV has outperformed the 1,200+ funds in the U.S. large-cap value category average in every one of the last 10 years.

The holdings within VTV are selected according to the CRSP US Large Cap Value Index, which has notable emphasis in health care, financials, and industrials in its current form. This ETF counts Berkshire Hathaway, Johnson & Johnson, Proctor & Gamble, United Health Group, and JPMorgan Chase in its top five holdings. Additionally, all holdings are market-cap weighted according to a more traditional index methodology.

The alleviated allocations in the technology sector are one reason why VTV has lagged the broader S&P 500 Index over the last half-decade. However, that same factor may be an attractive feature for advisors looking to diversify towards companies with strong balance sheets and mature business models. The VTV portfolio certainly lends itself towards a higher representation of cyclical sectors such as energy, industrials, and materials when compared against the total market benchmark.

<u>Invesco S&P 500 Equal Weight ETF (RSP)</u>	
Inception Date:	4/24/2003
Assets:	\$13.6B
Avg Daily Volume:	1.8M
Expense Ratio:	0.20%
# of Holdings:	505
YTD Return:	-5.32%
3-Yr Return:	18.22%
Mstar Rating:	2 Star

Another attractive factor of VTV is its dividend yield, which is currently listed at 2.82%. That's 75% more income than you receive for owning the 1.60% yield of SPY with dividends paid quarterly to shareholders. A fund such as VTV is an excellent way to gain core exposure to the value factor without sacrificing liquidity, tax efficiency, or carrying costs. It is one of the easiest ways to own a diversified group of high-quality stocks with far more reasonable valuations as compared to the blended S&P 500.

Those who prefer a BlackRock product should consider the **iShares Core S&P U.S. Value ETF (IUSV)**. It

carries a similar 0.04% expense ratio, with nearly \$7 billion in assets, and 680 holdings. IUSV sports comparable sector allocations and many of the same top holdings as VTV.

Investment Idea 3: Pure Value

If there is a criticism to be made of these ETFs, it's that they are possibly too diverse and constructed using overly simplistic methods. This may fail to resonate with investors who truly worship at the altar of fundamental analysis or are seeking an alpha-oriented approach.

Value purists may scoff at the likes of VTV and IUSV in favor of deeper analysis and a smaller pool of stocks with the capability to show off this factor tilt. Multiple fundamental screens that incorporate ratios such as price-to-book, price-to-sales, and price-

to-earnings are commonly used criteria. Fortunately, there is an ETF that brings the true spirit of value investing back to its roots.

<u>Vanguard Value ETF (VTV)</u>	
Inception Date:	1/26/2004
Assets:	\$50.5B
Avg Daily Volume:	1 M
Expense Ratio:	0.04%
# of Holdings:	333
YTD Return:	-12.39%
3-Yr Return:	9.54%
Mstar Rating:	4 Star

The **Invesco S&P 500 Pure Value ETF (RPV)** is an index-oriented fund that owns around 100 value stocks culled from the broader S&P 500 Index. What makes this fund unique is that it puts a more stringent valuation screen to the benchmark to rule out blended or ambiguous style stocks. The result is a more concentrated portfolio of "pure" companies with characteristics embodying strong balance sheets and low-priced valuations.

Another attractive feature of the RPV portfolio is that it weights holdings according to the highest value scores rather than market-cap or equal-weight allocations. This creates a stronger influence of fundamentally attractive companies such as Berkshire Hathaway Inc (BRK/B), General Motors

(GM), Ford Motor Co (F), and Archer Daniels Midland (ADM) at the top of the mix. Top sector rankings in this portfolio include financials, consumer discretionary, materials, and health care.

At current levels, the RPV portfolio sports a blended price-to-earnings ratio of just

15.23 and a price-to-book ratio of 0.96. Both metrics are significantly lower and ultimately more attractive for long-term investors than what you would find in blended or growth-oriented indexes. RPV has been in existence for well over a decade now and has accumulated \$626 million in assets.

The fund also charges a very reasonable expense ratio of 0.35%.

The risks investors must consider with RPV is just how deep down the value well they are willing to fall. Purchasing intrinsically discounted stocks with attractive financial catalysts means investors must have the patience for them to ultimately recover and thrive during the next pro-cyclical economic phase.

RPV experienced a steep drop during the COVID meltdown in early 2020 and has yet to regain its prior highs. Fortunately, its trend chart is indicating a recovery price pattern that just recently re-captured the long-term moving average.

The holdings in this fund are reconstituted and re-balanced just once annually so these stocks have the opportunity to prove their worth within the basket over a longer time frame. That also means the portfolio performance is likely to vary significantly from the market benchmark SPY and even a factor benchmark such as VTV.

A fund such as RPV is best used in a more tactical capacity to overweight a portion of the portfolio towards this pure factor rather than as a large core position. Clients who are going to be most successful with this type of fund are able to ignore recent historical performance in favor of attractive relative valuation metrics. Furthermore, they should be prepared to settle in for a long-term holding period in order to fully reap the rewards of a deep value strategy.

Evaluating the Efficacy of Active Management

The majority of the exchange-traded funds in the value and cyclical factor trade are index vehicles.

These passive tools are excellent ways to gain low-cost exposure to a wide swath of companies exhibiting similar fundamental characteristics. However,

there also is a longstanding cabal of actively managed mutual funds with billions of assets and decades of track record that are worthy of evaluation as well.

We utilized our advanced screening tools to compare some of the most well-known and highly rated value mutual funds against the ETF benchmarks we listed above. This included competitors such as the Dodge & Cox Stock Fund (DODGX), Vanguard Wellington Fund (VWNDX), Fidelity Low Priced Stock Fund (FLPSX),

American Funds American Mutual (AMRMX), and AMG Yacktman (YACKX) to name a few.

The performance results fell along two categories:

- The performance of the majority of these funds either met or fell short of the benchmark VTV on any reasonable long-term time frame such as five or 10 years.
- The handful of funds that were outperformers over these timeframes did so because of an oversized exposure to technology stocks. They were essentially more of a blended large-cap fund with a modest value tilt.

The observations of this analysis bear out that active management (i.e. stock picking) has done little to add meaningful alpha over a low-cost index replacement. Almost all of these open-ended mutual funds charge higher net management fees that drag on long-term performance. While some might outperform in a single year or two, they tend to revert back to the category average returns with astonishing regularity.

Invesco S&P 500 Pure Value ETF (RPV)

Inception Date:	3/1/2006
Assets:	\$626M
Avg Daily Volume:	178K
Expense Ratio:	0.35%
# of Holdings:	102
YTD Return:	-26.02%
3-Yr Return:	-13.70%
Mstar Rating:	1 Star

It also bears repeating that if you are screening value funds for performance alone that you may end up missing the mark on your intended stock allocation objective. The top-performing value funds are likely to be focused on more tech exposure than you think and ultimately leave out a key ingredient for future success. The attractive factor of value funds at this stage of the game is an overweight position in cyclical sectors versus the broad market benchmarks.

Implementing Factor Investing Productively

It goes without saying that transitioning to a value-oriented investment strategy can be nerve-racking when viewed strictly through the lens of recent performance.

This anxiety is particularly acute when your primary stock exposure is indexed to meet or beat the total market. In this environment that means you likely have high exposure to holdings that are concentrated in crowded areas. Moving away from that strategy comes with its own sets of risks and benefits that must be appropriately communicated to clients in order to be effective.

Yet, at some point, the transition to value from growth will be the correct move to outperform over the years to come, and we are approaching several potential catalysts that could “kick-off” that rotation.

The number one reason to consider migrating away from traditional total market benchmarks is because they have ultimately become less diversified. The top stocks in the market have swollen to dominate the performance of your portfolios rather than allowing for an equitable dispersion of capital. Additionally, the length of the current growth factor trend should be starting to set off alarm bells in just how long these positive tailwinds can persevere.

Moving a portion of the portfolio to a factor-tilt strategy such as value means that long-term success will require patience. Returns can be unpredictable in any given year or environment and trying to employ market timing techniques to capture alpha is a strategy fraught with risk.

A sound application of this methodology is to lean on evidence-based criteria to make incremental changes to the portfolio. That may include consolidating indi-

vidual stocks to a more diversified ETF or slowly transitioning more total market and growth funds to balance out your factor profile. The results of these changes may not be immediate, but over time they are more likely to produce less volatility and enhanced returns as compared to the

status quo.

It's also keen to be wary of overcomplicating your approach with high-cost active managers or “quasi-value funds” that try to mirror the sector allocation of the broad market. These strategies may ultimately be riskier than sticking with a traditional benchmark for your core equity holdings.

One of the best tools you can offer your clients is the foresight to make proactive changes in advance of developing market trends with the goal of reducing volatility and enhancing long-term returns. The funds listed in this report can assist in that endeavor and will strengthen your portfolio in the years to come.

Best,

Tom

<u>Fund/Stock</u>	<u>Strategy</u>	<u>Date</u>	<u>Total Re-turn</u>	<u>Benchmark Performance Since Issue Date</u>
<u>Cash Alpha</u> FPNIX (FPA New Income)	<p>FPNIX has generated positive returns for 33 straight years. No other non-government bond fund can boast of an equivalent track record. We also featured "MaxMyInterest," which produces 140 to 150 basis points of alpha versus traditional cash vehicles (MMAs, MMFs, and CDs). Max also increases FDIC insurance and can give advisors visibility to held-away cash.</p> <p>What to do now: Buy (Max is also an excellent cash management solution).</p>	Issue 15: 3/6/18	FPNIX: 8.12%	BIL: 3.97%
<u>Index Rebal</u> KBA (KraneShares Bowers MSCI China A Share ETF)	<p>KBA is an index rebalance play based on the inclusion of Mainland Chinese equities (A-shares) into MSCI Global Standard Indexes. The first two steps will take place on June 1st and September 1st. KBA is our gateway to front-run massive index funds that will be forced to buy its underlying holdings.</p> <p>What to do now: Buy.</p>	Issue 16: 3/20/18	KBA: 20.75%	ACWX: -2.66%
<u>Anti-Trade War</u> QABA (First Trust Nasdaq ABA Community Bank Index Fund)	<p>QABA is a play to protect against trade war ramifications (97% of its sales are U.S.-sourced). Additionally, it should also be a beneficiary of U.S. tax reform, in that, smaller U.S. companies should capture most of the 35% to 21% corporate tax cut. We also featured three more ETFs (AMCA, AIRR, KRE) and two exclusive stock screens—run through Cap IQ—for advisors to share with clients who have trade war concerns.</p> <p>What to do now: Buy.</p>	Issue 18: 4/17/18	QABA: -25.84%	SPY: 27.94%
<u>Foreign Small Caps</u> VSS (Vanguard FTSE All-World ex-US Small-Cap ETF) DLS (WisdomTree International Small-Cap Dividend Fund)	<p>Most advisors don't allocate to international small caps. But, we think they should reconsider. This hidden asset class holds several advantages over its U.S. equivalents: cheaper valuations, less volatility, lower correlations, higher dividend yields, and past outperformance. We highlight multiple individual ETFs, ETF combinations, and actively-managed mutual funds that do the trick.</p> <p>What to do now: Buy.</p>	Issue 19: 5/1/18	VSS: -7.89% DLS: -16.16%	EFA: -4.85%
<u>Disruptive Innovation</u> ARKK (ARK Innovation ETF)	<p>Investing in the "cornerstone themes of disruptive innovation" has resulted in huge profits over time (think Amazon, Apple, and Netflix). ARK sees current investment opportunities in innovation platforms, such as automation, energy storage, DNA sequencing, next generation internet, blockchain technology, etc. ARK's top innovation-based themes are all represented in ARKK. In 2017, ARKK was the #1 performing ETF (excluding leveraged and inverse ETFs) with a return of 87%!</p> <p>What to do now: Buy.</p>	Issue 20: 5/15/18	ARKK: 119.6%	SPY: 27.58%
<u>Buybacks</u> PKW (Invesco Buy-Back Achievers ETF)	<p>Companies with meaningful share count reduction have outperformed over the long term with lower volatility. Currently, U.S. companies are flush with cash due to tax cuts and repatriation. In turn, share repurchases broke a new record in Q1 2018 and they're on pace to set a new record for 2018. PKW is the premier ETF to profit from buybacks (largest asset base and longest history). We also featured four alternative ETFs (SPYB, TTFS, DIVB, SYLD) and some individual stock lists.</p> <p>What to do now: Buy.</p>	Issue 21: 5/29/18	PKW: 28.51%	SPY: 10.03%
<u>"FANG and Friends" of Emerging Markets</u> EMQQ (Emerging Markets Internet & Ecommerce ETF)	<p>"By 2025, annual consumption in emerging markets will reach \$30 trillion—the biggest growth opportunity in the history of capitalism."—McKinsey & Company. The combination of four major forces in emerging markets make this a great investment setup: favorable demographics, increasing smartphone availability, surging wireless broadband and Wifi access, and the globalization of the capital formation process. EMQQ is the best ETF to invest in this great confluence. We also featured three alternative ETFs (ECON, KWEB, KEMQ).</p>	Issue 23: 6/26/18	EMQQ: 52.47%	EEM: 9.89%
