

SEVENS REPORT *alpha*

October 4, 2022

In Today's Issue

- **How to Protect Client Assets in a Deeper Bear Market.** What if things get really bad? That question was the inspiration for this Alpha issue, where we identify three strategies to protect client portfolios if the lows are materially broken, and we are looking at another 10%-20% decline in the S&P 500.
- **Investment Strategy 1: To Short or Not to Short?** **ProShares Short S&P 500 ETF (SH)** or the **ProShares Short QQQ (PSQ)**. Getting short the market is often floated as a downside hedge by clients, but it's a complicated decision. It's likely only appropriate for select clients, but if you want to utilize this tactic, we think sticking with the most liquid and tenured ETFs in the inverse space is the easiest way to execute this strategy. We do not think inverse leveraged ETFs are worth the risk.
- **Investment Strategy 2: Wait for the New Uptrend.** **Pacer Trendpilot US Large Cap ETF (PTLC)**. The basic premise behind PTLC is to participate when the stock market is going up, and then to move to cash (or Treasury bills) when the market is trending down. The fund utilizes the 200-day moving average as its primary signal. It has \$2 bln in AUM and is down just 9.3% YTD (less than half the S&P 500) and is poised to get back long stocks if there's a substantial rebound.
- **Investment Strategy 3: Strategic Cash Management.** **iShares 0-3 Month Treasury Bond ETF (SGOV)**. Keeping cash safe and earning some return will be an important strategy should the market break materially lower. While money market funds may offer more short-term returns, some clients may still be hesitant to have cash in those accounts given the headlines during the 2008 financial crisis. SGOV provides safety, liquidity and minimal fees.

How to Protect Client Assets In A Deeper Bear Market

The stock market has been volatile throughout 2022 as the financial environment has drastically shifted. Interest rates on the short end of the yield curve have been on a vertical trajectory in tandem with the Federal Reserve's mission to materially slow inflation. This sharp change in monetary policy has created the feared "inverted yield curve," whereby short-term rates spike while long-term rates have been held in check by fears of a slowing economy and ultimately a recession.

The effects of these forces on the equity market have been destructive to say the least. The June 2022 low of 3,666 on the S&P 500 Index was a textbook drop into bear-market territory that was followed by what now has proven an over-optimistic bull rally. The follow-on headlines of a persistently tight labor market and rising costs of goods has stamped out hopes of a happy ending, and in the week leading up to this issue, the major indices have descended below the June lows and down to levels not seen since 2020.

Sellers are actively discounting the major stock indexes based almost solely on a factor of earnings multiples as it relates to interest rates rather than quarterly financial reports. The "economic slow-down" hasn't even manifested yet in the business activity of most blue-chip stocks. This is why so many experts now are predicting that, with the Fed on a path to raise rates by another 150 basis points, it's probable that we enter a full-blown recession in 2023.

An event like that could push the S&P 500 Index back down to the 3,200-3,300 level where it gained momentum following the COVID pandemic recovery. That would represent a 31% drop from high to low and be consistent with an average bear market cycle over the last hundred years.

Another even more frightening scenario would be the market erasing the entire move from the 2020 COVID pandemic lows where it bottomed near the 2,200 level. That would represent a drop of 54%

from high to low. Of course, that would also be the point where you would ultimately be backing up the truck and buying into stocks with every ounce of capital available.

The question ultimately becomes, how do you protect your client's capital in the event that either of these fresh bearish scenarios unfold?

Going 100% to cash isn't going to be a viable option for most advisors because it's essentially giving up on the entire concept of investing in the public markets. There also is no way that you can accurately predict exactly where the low will be and get back into the stock market in time to make up those gains when it ultimately recovers.

The more astute strategy is to combine a mix of high-quality assets with risk mitigation tools to lower your total portfolio volatility. There are no short-term winners in a bear market. However, being able to take sensible steps to reduce your downside will create a psychological cushion for your clients to stay the course and bolster your professional value proposition.

We also want to spotlight which investment vehicles you need to avoid so that you won't get burned by hidden pitfalls. The following issue details more progressive strategies for advisors to use in this unprecedented environment in order to weather another deeper bear market.

Investment Strategy 1: To Short or Not to Short?

Clients are always looking for an edge in their portfolios and during a bear market they are going

to be exploring the efficacy of shorting stocks. The financial media helps fuel this aggressive strategy by embellishing the advantages of hedge funds and other active managers that utilize these inverse po-

sitions regularly. You may even be asked by a client whether this would be an appropriate risk mitigation tool for their portfolios or whether they can outright profit from

"going short."

The answer is complex given the myriad hurdles that must be considered before embarking on this path. For many advisors, there are investment policy rules or firm-wide restrictions that outright forbid the shorting of stocks on their brokerage platforms. Even the use of single-beta inverse ETFs has been excluded from the list of available securities to purchase at any time. If you find yourself in that group, it's best to steer the discussion of investment strategy away from individual short positions and towards viable alternatives that we detail further on in this report.

For those advisors that use independent platforms such as Fidelity Investments, Charles Schwab, or TD Ameritrade you have more latitude in security selection that allows for shorting individual stocks or purchasing inverse ETFs. This group is going to be tempted to utilize these tools and is likely to be asked about them more frequently by their clients than any other. What we want to stress is that there are benefits and risks to using short positions that must be thoroughly evaluated before embarking on this journey.

You must set the expectation from the outset that shorting the market is a temporary trade with a specific use case. Additionally, you should be able

Sep 22 2022, 10:36PM EDT. Powered by YCHARTS

to answer all these questions below with authority before placing any orders on behalf of your clients.

- What are your goals?
- What investment vehicles are available to use?
- What investment vehicles are appropriate for your clients?
- What will be your total risk exposure?
- Do you use a stop loss to control risk?
- What will be your entry and exit triggers?
- How will you communicate these targets and objectives to clients?

In terms of security selection, our preferred vehicles for this task are single-beta inverse ETFs such as the **ProShares Short S&P 500 ETF (SH)** or the **ProShares Short QQQ (PSQ)**. Both funds seek to provide daily inverse exposure to either the S&P 500 Index or Nasdaq 100 Index, respectively. What makes these funds stand out from the crowded field of available alternatives is their size, longevity, and track record in all market environments.

These ETFs have been in existence for more than 16 years and

have amassed multi-billion-dollar asset pools based on their consistent ability to track the daily inverse price movement of their stated index. They function by utilizing swaps and futures contracts to achieve this inverse price correlation.

While that might sound complex on the surface, their real-world function is remarkably easy to understand. On any given day, if the index goes down 1%, the ETF goes up 1%, and vice versa. What this means for investors is that you receive a reliable investment vehicle with a high degree of liquidity and low tracking error.

Critics will point out that the combination of fee drag and accumulative small variations in daily performance will see deviations in price between the underlying index and the ETF over long periods of time. Historically, this typically translates to a percentage point or two under normal market conditions each year.

Furthermore, it should be clear from the outset that these inverse ETFs are not designed to be buy-and-hold investment vehicles. They are intended to be purchased for short- to intermediate-term time frames with modest position sizes. Their best-use case is to hedge an abundant sleeve of equity exposure that you or the client does not want to sell due to tax implications or long-term strategic objectives. Both SH and PSQ can offset total portfolio downside

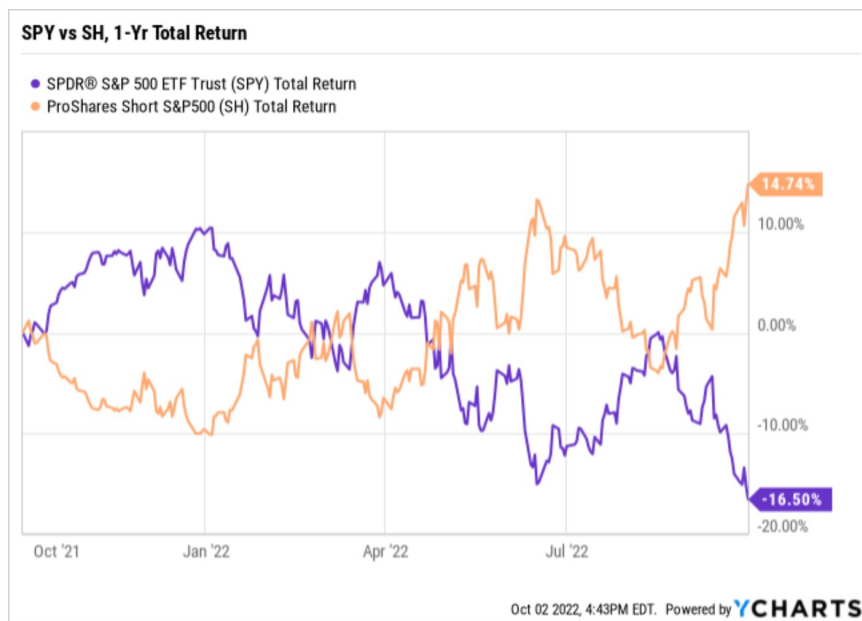

risk by providing a counterbalancing effect to an out-sized allocation of long stock holdings.

Timing is another critical factor to enhance your odds of success with any inverse stock position. The best trading strategy is to purchase these holdings during a rally in the market in anticipation of

another downward leg to follow. This allows you to buy the hedge at a more advantageous cost basis and at a spot where the long holdings are more susceptible to further market headwinds.

Conversely, the best spot to sell the hedge is when the market appears oversold and is signaling that another rally may be imminent. This counterintuitive approach is another psychological dynamic that must be managed when utilizing these non-traditional tools.

The obvious related inquiry on this topic is whether it's appropriate to purchase two-beta or three-beta

inverse ETFs to enhance your hedging ability. Our take on these ultra-aggressive vehicles is that they multiply the risks exponentially and should not be utilized in client accounts.

The primary reason is that leveraged ETFs experience unacceptable degrees of tracking error over time given the larger magnitude of their daily price action. Those vehicles are designed to be bought and sold using a holding period of hours or days rather than weeks or months. That type of high-frequency trading doesn't correlate with a conventional advisor-managed portfolio and the risk of loss far outweighs the potential for incremental gains. I equate it to playing Russian roulette with five bullets in a six-shooter.

Those that want to get more aggressive with their hedges would be better off doubling the position size of a single-beta inverse ETF as opposed to taking a smaller allocation to a leveraged fund.

The net impact to the portfolio will be similar yet allow for a more predictable daily price movement and manageable risk profile in a fast-moving market. Regardless of the position sizing, you want to have a clearly defined exit strategy to remove the hedge should the market move to a pre-defined downside or upside target.

Investment Strategy 2: Wait for The New Uptrend

Trend following is one of the oldest applications of technical analysis and one that active investors have implemented for over half a century. The basic premise is rooted in the notion of using a historical average price or some other regularly calculated indicator to determine when to be in, and when to be out, of the market. Until recently, most of this

work had to be done manually by monitoring the market and adjusting individual positions by buying or selling as needed. Fortunately, that step now has been automated by a fund that has appealing characteristics for waiting out a bear market.

The **Pacer Trendpilot US Large Cap ETF (PTLC)** is a smart-beta index fund that tracks a specialized trend-following strategy designed to protect capital in a down market. The basic premise behind PTLC is to participate when the stock market is going up, and then to move to cash (or Treasury bills) when the market is trending down. The fund accomplishes this through a systemic, rules-based methodology

that indicates when a positive or negative trend is established using the 200-day simple moving average.

In an uptrend, PTLC owns 100% stocks via the S&P 500 Index. The fund then moves to 50% stocks and 50% 3-month Treasury bills when the index falls below the trend line for

five consecutive days. Then, the fund uses a final confirming indicator to move to 100% Treasury bills if the simple moving average falls lower than its prior reading for five days. The process starts over again once the index regains its 200-day moving average on the upside. Simple. Logical. Automated.

The obvious advantage of this strategy is that it is designed to keep your money safe during a prolonged bear market such as we experienced in 2008. Multiple months or even years of persistent selling pressure can be avoided by having your capital protected near the top quartile of a new down cycle. The goal here is also to get you back into the market at a much lower point, and with more starting capital than if you had held your way through on the downside.

As you can see on the chart on Page 4, PTLC has moved to a position of 100% 3-month Treasury bills as it waits out the storm. That means the entire portfolio is allocated to safe, income-producing assets on the short end of the yield curve. Investors in PTLC are even seeing some modest capital appreciation at present because of how well ultra-short-term Treasury bills are performing in this rising rate environment.

The advantage of utilizing this fund's strategy is that your money is sheltered from the market volatility until the next true uptrend develops. The fund will move back into stocks once the S&P 500 Index closes above its long-term trend line for five consecutive days. That five-day buffer helps avoid a phenomenon known as a "whipsaw," whereby an index touches its trend line and immediately reverses course. That exact scenario took place in August when the S&P 500 experienced a fierce rally that was turned away at this technical inflection point. The logic buffer in PTLC wasn't fooled into buying back into the market only to see prices fall once again.

Some investors may be wary about using a trend-following strategy because it won't buy at the absolute bottom of the market. That's a fair admonishment, but one that is also accurate about any active purchases of stocks when the market is in turmoil. There is no way to determine exactly where the bottom will be and what the perfect timing mechanism is for buying or selling. Taking the guesswork out of the equation and shifting to a rules-based methodology is a proven strategy for eliminating this stress.

One key advantage of the trend-following strategy at this stage is that the portfolio is essentially 100% cash at present and the slope of the 200-day moving average on the S&P 500 Index has rolled over. That means the trend line is now following the price pattern through the downward descent like a wingman tracking the same flight path. This means the PTLC portfolio is apt to trigger a new buy signal well before stocks pursue an extended rally where new investors feel left out of the game.

PTLC currently has \$2 billion in total assets and enough consistent daily trading volume to be considered liquid for most advisors' purposes. The underlying holdings in both stocks and bonds are some of the most heavily traded assets in the world on any given day. The fund also charges an expense ratio of 0.60%, which is on the high side for a typical static index ETF, but reasonable for a quasi-active approach.

Other than brief periods of moving to cash at points of hyperactive market volatility, PTLC has done a fine job of tracking the broad market and avoided unnecessary out-of-market activity over its seven-year history. It will continue to shine bright as the stock market extends its current bearish price pattern and is well positioned for advisors that want added risk protection in this market.

One potential use case for this trend-following ETF is to shift capital that you have raised from selling stocks early in this cycle and are looking to re-deploy back into the market once the dust settles. If that money is already sitting in cash or short-term bonds, then it's essentially going to be an apples-to-apples swap. It then eliminates the pressure of having to time your re-entry point and provides clients with an easy-to-understand strategy that they can rely on.

Investment Strategy 3: Strategic Cash Management

We've been talking about shortening the duration of your bond sleeve all year with the expectation that rising rates will be one of the biggest headwinds of 2022. The Fed's most recent 75-basis-point hike in the federal funds rate has shifted its benchmark to a target range of 3.00-3.25%, the highest level since 2008. Furthermore, they have signaled a continuing pace of hikes that would add another 150 basis points to that range by early 2023 designed to stamp out systemic inflation. Individual member expectations don't point to a rate cut until 2024 at the earliest. That means base rates will be elevated for the foreseeable future.

That trend has materially changed the landscape of money markets, Treasury bills, junk bonds, long-dated paper, and everything in between. Advisors should be continually evaluating and comparing these assets to ensure they are striking the right balance of risk (price) and reward (yield) on behalf of their clients. This is particularly acute when many of you have been moving money out of the market and are looking for opportunities to generate income with a measure of safety built in.

With an outsized cash position, clients are going to be vigorously scrutinizing their holdings and may be wary of too much capital sitting in money market accounts. Many advisors have told me that clients have a mentality that they don't want to pay for money to sit around when they could do that themselves. Therefore, having several landing places for this cash and having it appropriately diversified is a sound value-added investment strategy.

Additionally, there is some lingering anxiety among investors that money market funds are potentially unsafe. This may come from their experiences reading headlines during the 2008 financial crisis or how some brokerage platforms now attach an ominous disclaimer on money market funds that they are not covered

by any investor protections like FDIC insurance. We have an editorial roadmap to produce a full issue on this topic to debunk many of the misconceptions about money market fund risk, so stay tuned for that soon.

One additional investment opportunity that might be appealing is the same asset class that PTLC is currently enjoying – i.e. Treasury Bills. Access to which is easily obtained via the **iShares 0-3 Month Treasury Bond ETF (SGOV)**. This low-cost index fund owns a slice of the Treasury bond market with maturities of less than three months. That trans-

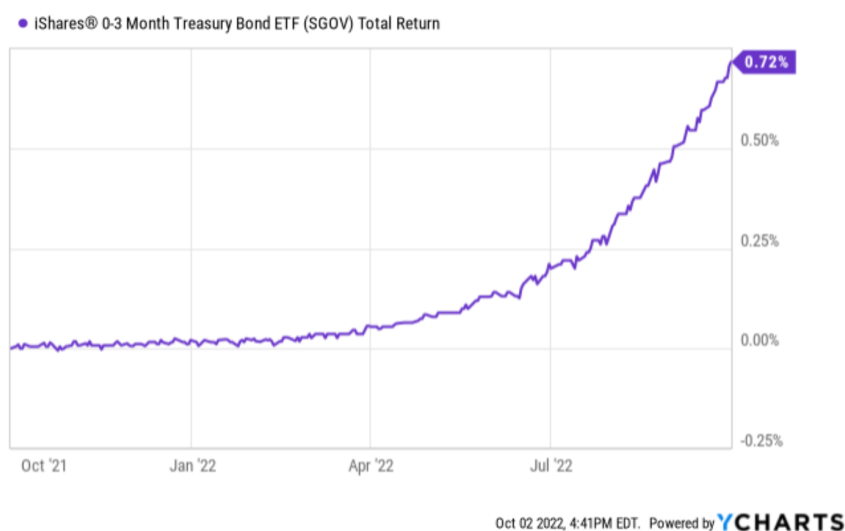

lates to many of the same high-quality debt securities that are owned by government money funds to generate their income streams.

The ultra-short-term duration means that the T-bill portfolio is quick to see its income stream jump as the Fed continues to raise rates. A look at the table here shows this progress in action via the distributions of SGOV over the last eight months.

Investors have witnessed steadily increasing rewards as new maturities are added to the portfolio with higher net crediting rates. It stands to reason that the Fed's intended outcome will only continue to bolster this trend through the remainder of 2022 and into the early part of next year.

Ex-Date	Distribution
1-Sep-22	\$0.1680
1-Aug-22	\$0.1157
1-Jul-22	\$0.0690
1-Jun-22	\$0.0414
2-May-22	\$0.0246
1-Apr-22	\$0.0184
1-Mar-22	\$0.0083
1-Feb-22	\$0.0018

SGOV1-Yr Total Return

Other benefits to the SGOV portfolio include its deep well of liquidity, \$4 billion in total assets, and a minuscule 0.05% net expense ratio. This means there is very little management fee drag on the portfolio and more net performance or income is delivered to shareholders than comparable

investment vehicles. The current 30-day SEC yield of SGOV is a healthy 2.29% with income paid monthly to shareholders. Moreover, the representative trajectory points towards a near future where this fund could yield more than 3% with minimal relative price fluctuations.

This fund can be utilized as a holding spot for cash sitting on the sidelines or as a potential replacement for intermediate-term bond funds failing to offer higher relative yield in exchange for interest rate sensitivity. When you consider that the iShares 7-10 Year Treasury ETF (IEF) is yielding less than 100 basis points more than SGOV, it just doesn't make sense in many instances to take on that substantial risk to capital. IEF is down 15.7% in 2022 on a total return basis compared to the 0.69% gain in SGOV, much of which has come over just the last four months as the Fed has accelerated its pace of quantitative tightening.

The bottom line is that you should be utilizing tools such as this as part of a broader strategic cash management or fixed-income replacement solution over the next six to 12 months. It will provide enhanced yield for the portfolio and smooth out the unpredictability of intermediate-term bond funds. It will also give clients confidence that their money is being invested in income-earning vehicles rather than sitting idly on the sidelines.

Conclusion

The current bear market in stocks and bonds is unlike any period investors have experienced in several decades. That means weathering the storm is going to require the acceptance of new tools and a fresh look at investment vehicles that may not have been considered during prior corrective phases.

Our recommendation is to increase the frequency of your investment committee meetings or monthly market analysis time in order to evaluate every position within the portfolio. That will organically lead to the comparison of performance versus alternative funds to determine whether additional adjustments may be needed. You may find a spot for one or more of the funds mentioned in this report to fill a necessary role within the portfolio.

Best,

Tom

The first two steps will take place on June 1st and September 1st. KBA is our gateway to front-run massive index funds that will be forced to buy its underlying holdings.</p> <p>What to do now: Buy.</p>	<p>Issue 16: 3/20/18</p>	<p>KBA: -1.56%</p>	<p>ACWX: -8.13%</p>
<u>Anti-Trade War</u> QABA (First Trust Nasdaq ABA Community Bank Index Fund)	<p>QABA is a play to protect against trade war ramifications (97% of its sales are U.S.-sourced). Additionally, it should also be a beneficiary of U.S. tax reform, in that, smaller U.S. companies should capture most of the 35% to 21% corporate tax cut. We also featured three more ETFs (AMCA, AIRR, KRE) and two exclusive stock screens—run through Cap IQ—for advisors to share with clients who have trade war concerns.</p> <p>What to do now: Buy.</p>	<p>Issue 18: 4/17/18</p>	<p>QABA: 4.53%</p>	<p>SPY: 45.56%</p>
<u>Foreign Small Caps</u> VSS (Vanguard FTSE All-World ex-US Small-Cap ETF) DLS (WisdomTree International Small-Cap Dividend Fund)	<p>Most advisors don't allocate to international small caps. But, we think they should reconsider. This hidden asset class holds several advantages over its U.S. equivalents: cheaper valuations, less volatility, lower correlations, higher dividend yields, and past outperformance. We highlight multiple individual ETFs, ETF combinations, and actively-managed mutual funds that do the trick.</p> <p>What to do now: Buy.</p>	<p>Issue 19: 5/1/18</p>	<p>VSS: -11.15%</p> <p>DLS: -18.82%</p>	<p>EFA: -6.77%</p>
<u>Disruptive Innovation</u> ARKK (ARK Innovation ETF)	<p>Investing in the "cornerstone themes of disruptive innovation" has resulted in huge profits over time (think Amazon, Apple, and Netflix). ARK sees current investment opportunities in innovation platforms, such as automation, energy storage, DNA sequencing, next generation internet, blockchain technology, etc. ARK's top innovation-based themes are all represented in ARKK. In 2017, ARKK was the #1 performing ETF (excluding leveraged and inverse ETFs) with a return of 87%!</p> <p>What to do now: Buy.</p>	<p>Issue 20: 5/15/18</p>	<p>ARKK: -6.95%</p>	<p>SPY: 45.10%</p>
<u>Buybacks</u> PKW (Invesco Buy-Back Achievers ETF)	<p>Companies with meaningful share count reduction have outperformed over the long term with lower volatility. Currently, U.S. companies are flush with cash due to tax cuts and repatriation. In turn, share repurchases broke a new record in Q1 2018 and they're on pace to set a new record for 2018. PKW is the premier ETF to profit from buybacks (largest asset base and longest history). We also featured four alternative ETFs (SPYB, TTFS, DIVB, SYLD) and some individual stock lists.</p> <p>What to do now: Buy.</p>	<p>Issue 21: 5/29/18</p>	<p>PKW: 44.10%</p>	<p>SPY: 46.24%</p>
<u>"FANG and Friends" of Emerging Markets</u> EMQQ (Emerging Markets Internet & Ecommerce ETF)	<p>"By 2025, annual consumption in emerging markets will reach \$30 trillion—the biggest growth opportunity in the history of capitalism."—McKinsey & Company. The combination of four major forces in emerging markets make this a great investment setup: favorable demographics, increasing smartphone availability, surging wireless broadband and Wifi access, and the globalization of the capital formation process. EMQQ is the best ETF to invest in this great confluence. We also featured three alternative ETFs (ECON, KWEB, KEMQ).</p>	<p>Issue 23: 6/26/18</p>	<p>EMQQ: -25.55%</p>	<p>EEM: -10.47%</p>

<u>Capitalizing on mRNA and Other Medical Tech</u> ARK Genomic Revolution ETF (ARKG) Global X Telemedicine & Digital Health ETF (EDOC) ROBO Global Healthcare Technology & Innovation ETF (HTEC) Genomic Revolution Global X Genomics & Biotech ETF (GNOM)	Because of the success of mRNA in producing an effective COVID-19 vaccine at a record pace, along with the demonstrated effectiveness of anti-viral treatments like Remdesivir, we're likely to see a major acceleration in funding, research, and adoption of other cutting edge medical technologies and that means potentially substantial returns for companies with the right exposure.	7/13/2021	ARKG: -61.86% EDOC: -38.93% HTEC: -40.89% GNOM: -46.70%	SPY: -14.80%
<u>Five ETFs That Can Make Your Life As An Advisor Easier</u> Vanguard Total World Stock ETF (VT). iShares MSCI ACWI ETF (ACWI). iShares MSCI Global Min Vol Factor ETF (ACWV). iShares MSCI ACWI Low Carbon Target ETF (CRBN).	So how do you bridge the gap between an seven-figure trust and that clients nephew's tiny Roth IRA? Both are important to the overall relationship. You start by syncing up some of the foundational core holdings that make up the bulk of your asset allocation. Specifically, we identify foundational "own everything" ETFs you can use across account sizes to simplify smaller account administration and reduce variety among core ETF holdings, thereby making you more efficient:	7/27/2021	VT: -20.28% ACWI: -20.28% ACWV: -12.29% CRBN: -21.93%	SPY: -15.26%
<u>Stagflation Playbook</u> First Trust Dow Jones Internet Index Fund (FDN). Invesco S&P 500 Equal Weight Consumer Staples ETF (RHS). VanEck Vectors Investment Grade Floating Rate ETF (FLTR). Aberdeen Standard Bloomberg All Commodities Strategy K-1 Free ETF (BCI).	This Alpha issue is focused on something we sincerely hope never happens: Stagflation. That's because a stagflationary environment is a very difficult one to successfully invest in as, broadly speaking, it's negative for most stocks, most bonds, and idle cash (purchasing power is eroded through inflation). Positively, stagflation is not the most likely macro-economic scenario going forward (a stock positive reflation scenario is the most likely future macro set-up). But, stagflation risks are still at multi-decade highs, so the risks can't be totally ignored, either.	8/24/2021	FDN: -47.42% RHS: 0.36% FLTR: -1.32% BCI: 19.55%	SPY: -16.83%
<u>Learning to Live with COVID</u> Vaccine Markers (Multiple Stocks & ETFs) Global X Telemedicine & Digital Health ETF (EDOC). Amplify Online Retail ETF (IBUY). VanEck Vectors Morning Star Durable Dividend ETF (DURA).	In this Alpha issue, we examine the strategies and sectors that will benefit from society learning to "live" with COVID over the medium and longer-term, and the inspiration for this issue came from real life. We believe that reality will cause more permanent adoption of some "temporary" pandemic era behaviors, and we believe that should lead to some attractive investment opportunities.	9/8/2021	MRNA: -72.04% BBH: -35.04% EDOC: -39.98% IBUY: -65.47% DURA: -10.79%	SPY: -19.33%

Contrarian Investment Idea 2: Gold & Silver Miners Dig Up Profits. VanEck Vectors Gold Miners ETF (GDX) and Global X Silver Miners ETF (SIL). Contrarian Investment Idea 3: Investors Flock To Low Volatility Sectors. Utilities Select Sector SPDR (XLU) and PowerShares S&P 500 Low Volatility ETF (SPLV).	Today's Alpha is our annual Contrarian Issue, where we identified some of the worst-performing sectors and factors for 2021 and analyzed them to identify three sectors that we think could be poised for a big turnaround in 2022. We have produced this annual Contrarian Issue for the last several years to serve two primary functions. First, I'm a contrarian investor at heart, and I always enjoy scouring what "didn't" work during an investment year to determine whether these relatively cheap sectors or factors present an attractive opportunity, as contrarian investing can lead to outperformance. Second, we like to provide these contrarian ideas so that if a client asks you "What's cheap right now?" or "Are there any opportunities from last year?" you have interesting, well-founded ideas that can impress clients and prospects.	12/28/2021	KWEB: -34.79% CXSE: -35.34% GDX: -20.04% SIL: -30.62% XLU: -4.44% SPLV: -13.34%	SPY: -23.52%
<u>Practical Crypto Strategies for Clients</u> Greyscale Bitcoin Trust (GBTC) Amplify Transformational Data Sharing ETF (BLOK) ProShares Bitcoin Strategy ETF (BITO)	The push of cryptos into the cultural mainstream in 2022, along with substantial investment gains over the past several years, has resulted in a surge in interest in crypto exposure from investors. And, while there remains a lot of risks associated with crypto trading, the bottom line is that an advisor can only dissuade a client from cryptos for so long before it hurts the relationship. Given that, our goal in today's Alpha issue is to highlight some of the best and most responsible strategies to provide clients with crypto exposure without taking an overabundance of risk.	1/11/2022	GBTC: -62.34% BLOK: -50.21% BITO: -55.26%	SPY: -22.09%

Sevens Report Alpha Fund & Stock Ideas

<u>Fund/Stock</u>	<u>Strategy</u>	<u>Date</u>	<u>Total Return</u>	<u>Benchmark Performance Since Issue Date</u>
<u>Weathering Market Volatility with "Quality" ETFs.</u> Quality Idea 1: Financials. First Trust Financials AlphaDex Fund (FXO). Quality Idea 2: Qualitative Value. ValueShares U.S. Quantitative Value ETF (QVAL). Quality Idea 3: Shareholder Yield. Cambria Shareholder Yield ETF (SYLD). Quality Idea 4: Core Value. Invesco S&P 500 Pure Value ETF (RPV).	This Alpha issue is an important complement to what we've been discussing in the regular Sevens Report, namely that we believe the best way to weather this increased volatility in markets is by allocating to "Quality" stocks, sectors, and ETFs. For us, "quality" means those stocks and ETFs with lower relative price-to-earnings (P/E) and price-to-book (P/B) ratios, strong free cash flow, and solid shareholder yield. We believe these stocks and sectors will be the most insulated from the effects of interest rate hikes, possibly slowing growth and other headwinds, and find themselves as high-quality landing spots for investment capital.	1/25/2022	FXO: -15.11% QVAL: -11.85% SYLD: -11.71% RPV: -10.22%	SPY: -14.79%
<u>Finding Value and Opportunity in International ETFs</u> Schwab Fundamental International Large Company Index ETF (FNDF). iShares Edge MSCI Intl Quality Factor ETF (IQLT). Vanguard International High Dividend Yield ETF (VYMI).	We've been talking a lot in the Sevens Report about wanting to allocate towards lower P/E sectors, and the fact is that quality international stocks in developed markets are currently trading at heavy discounts to the S&P 500. We think the combination of low valuations and less-aggressive central banks makes international exposure an important part of a diversified investment strategy going forward.	2/8/2022	FNDF: -22.89% IQLT: -22.92% VYMI: -21.60%	SPY: -18.09%
<u>What Would Outperform If Markets Turn Around?</u> SPDR FactSet Innovative Technology ETF (XITK) Vanguard Consumer Discretionary ETF (VCR) iShares Broad USD High Yield Corporate Bond ETF (USHY) SPDR Blackstone Senior Loan ETF (SRLN)	Today's issue was inspired by this thought: <i>What if everything works out alright?</i> Many analysts (including me) are concerned about numerous headwinds hitting the U.S. markets and a potentially volatile trading year. That opinion has been correct so far in 2022, and it's well-reasoned. But it's also a very popular view on the Street right now. So, in today's issue, we identify a playbook to outperform if, simply speaking, everything works out great!	2/23/2022	XITK: -30.71% VCR: -16.11% USHY: -13.55% SRLN: -9.35%	SPY: -13.35%

<u>Strategies for a Peak in Bond Yields</u> First Trust NASDAQ Technology Dividend Index Fund (TDIV) Vanguard REIT ETF (VNQ) Pacer Benchmark Industrial Real Estate SCTR ETF (INDS) Pacer US Cash Cows 100 ETF (COWZ)	<p>Yes, the Fed is set to hike the Fed Funds rate by another 100 – 200 basis points, but the long end of the yield curve is driven by inflation expectations and growth estimates, not directly by Fed rate hikes.</p> <p>So, if inflation is peaking and economic growth is rolling over (which is what the stock bulls are betting on) then longer dated bond yields will also peak, regardless of Fed Funds hikes.</p> <p>As such, we wanted to identify ETFs that have high dividend yields and that can weather economic downturns, as they should outperform as bond yields decline, because happen sooner or later yields will peak (and we'll keep you updated on the movements in the regular Sevens Report).</p>	7/26/2022	TDIV: -12.47% VNQ: -12.62% INDS: -13.49% COWZ: -3.69%	SPY: -6.03%
<u>The State of the Crypto Market</u> Grayscale Bitcoin Trust (GBTC), Grayscale Ethereum Trust (ETHE). ProShares Bitcoin Strategy ETF (BITO). Amplify Transformational Data Sharing ETF (BLOK).	<p>The cryptocurrency industry and markets have witnessed extreme turmoil so far in 2022, but the longer-term story and investor appeal of cryptocurrencies and blockchain technologies remain generally intact.</p> <p>So, we wanted to provide an update on the state of the crypto markets and identify quality, actionable investments that have relatively weathered the storm should clients be interested in this segment.</p>	8/9/2022	GBTC: -18.26% ETHE: -26.40% BITO: -15.25% BLOK: -17.66%	SPY: -11.09%
<u>Sustainable Investing Revisited</u> Invesco MSCI Sustainable Future ETF (ERTH). iShares Self-Driving EV and Tech ETF (IDRV). SPDR S&P Kensho Clean Power ETF (CNRG).	<p>The funding provided by the Inflation Reduction Act, combined with the higher gas prices and the energy security situation in Europe, has reinforced that the sustainable energy industry isn't just here to stay, but that it'll continue to actively grow in the coming years.</p> <p>In past market downturns, the renewable energy sector usually performed very poorly. However, during this market decline, select renewable energy ETFs have handily outperformed the S&P 500 and we think that outperformance underscores the fact that this is becoming a more mature industry.</p>	8/23/2022	ERTH: -14.54% IDRV: -14.40% CNRG: -9.22%	SPY: -11.34%

<u>Repositioning for Another Rollover</u> Invesco S&P 500 Equal Weight Utilities ETF (RYU), Invesco S&P 500 High Dividend Low Volatility ETF (SPHD), The Best-Performing S&P 500 Stocks YTD (Excluding Energy), WisdomTree Floating Rate Treasury Fund (USFR).	<p>Our “Three Keys to A Bottom” still haven’t been satisfied, so we must acknowledge the possibility that the S&P 500 takes out new lows later this year, and the July/August rally was nothing more than a bear market bounce.</p> <p>Given this possibility, we wanted to investigate the sectors, strategies, stocks, and ETFs that outperformed during the first six months of 2022. We hope the analysis in this issue will serve as a potential blueprint for how to outperform if the last four months of 2022 look like the first six months of 2022.</p> <p>Notably, we excluded energy and commodities broadly from this research, and there’s one reason for that: Energy and commodity returns were turbocharged earlier in 2022 by the Russia/Ukraine war, and we simply don’t want to assume another similar event occurring between now and year-end. Put differently, we don’t want to assume another specifically bullish event occurs that sends those sectors higher.</p>	9/7/2022	RYU: -11.78% SPHD: -8.72% USFR: 0.23%	SPY: -7.62%
<u>Opportunities in the Nuclear Energy Revival</u> Uranium Mining Stocks. Global X Uranium ETF (URA), Nuclear Utility Stocks. VanEck Uranium + Nuclear Energy ETF (NLR), A Cutting Edge Approach. NuScale Power Corp (SMR).	<p>The Russia/Ukraine war has upset the global energy industry and as the EU and Britain scramble to find enough natural gas to satisfy their needs, nuclear energy emerged as a potential solution not just to the current global energy shortage, but also to satisfy the increased future demand as reliance on fossil fuels declines.</p> <p>More specifically, the Russia/Ukraine war has exposed a significant vulnerability in the EU’s energy situation and reduced natural gas flows from Russia have resulted in European countries embracing alternative forms of energy production, including nuclear.</p> <p>But, this isn’t just an EU phenomenon. Recently, Japan recommitted to nuclear power, and surging oil and gas prices combined with rising electricity costs have resulted in renewed interest in nuclear power in the U.S. as well.</p>	9/20/2022	URA: -5.46% NLR: -6.19% SMR: -13.15%	SPY: -5.28%
